

AIRPORT DATA AND INFORMATION

Update Your Data

The Airport Data and Information Portal (ADIP) helps the Federal Aviation Administration (FAA) collect airport and aeronautical data to meet the demands of the Next Generation National Airspace System.

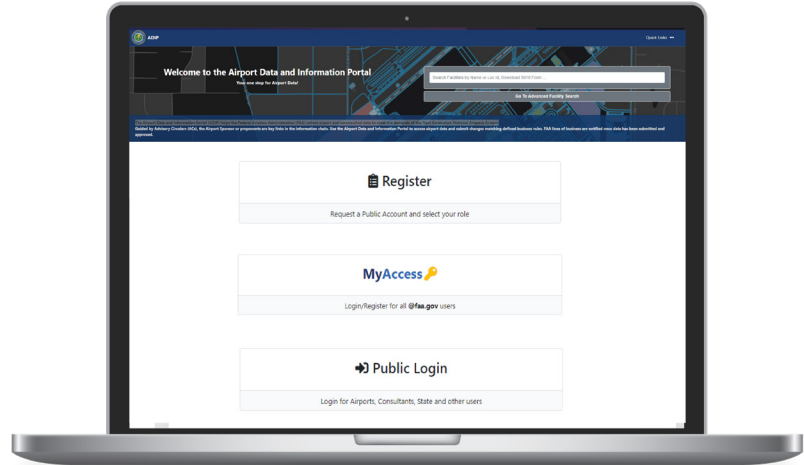

The Airport Master Record Module (AMR) can be found inside the Airport Data and Information Portal (ADIP). AMR will enable a user to make changes electronically to an airport's FAA 5010 Airport Master Record.

Update your data by registering your facility on the FAA's Airport Data and Information Portal website:

ADIP.FAA.GOV

ONCE YOU HAVE REGISTERED FOR AN ACCOUNT IN ADIP, FOLLOW THESE STEPS IN ORDER TO UPDATE YOUR FACILITY:

1. Login and go to the Airport Master Record Module (AMR) and select "Update Facility Data (Airport/Heliport)"
2. Enter your facility's Location ID (LocID) and select "Start Update"
3. On the Project Summary Screen select "Facility Data" and enter your changes
4. Click the "Save Changes" button
5. Click the "Submit Changes" button

For airports with no data changes, it is still important to enter the AMR Module of ADIP once every 3 years to keep your airport active and charted. To do so, simply follow steps 1, 2 and 5 (skip 3 and 4) described above. This will keep your facility information active and charted for the next 3 years.

The FAA has engaged GCR Inc. (dba Civix) to assist in the collection effort so if you have any questions please contact them by phone or email.

**YOUR SUPPORT OF THE FAA'S ADIP IS APPRECIATED.
