

AIRPORT SECURE CREDENTIALS EXPRESS

A Turnkey Identity Management Kiosk Solution

Civix's Airport Secure Credentials Express (ASCX) is a COTS approach to the IDMS world in a single, integrated kiosk—providing enterprise level security to small and mid-sized airports in an affordable, modular package. ASCX is an integrated badging kiosk, arriving pre-configured and integrated with your airport's Designated Aviation Channeler (DAC), Learning System (iLS) and other interfaces.

A TRULY COTS IDMS SOLUTION

Given today's complicated and bespoke IDMS market, current software offerings favor the largest airports. Secure Credentials Express removes today's heavy reliance on customization by introducing a truly COTS approach to the IDMS world in a single, integrated kiosk for the hardware with the software hosted in a secure SaaS environment. By adding ASCX to your Secure Credentials IDMS Solution, just plug in the power and the internet connection, and you'll be on your way to a fully-functional IDMS kiosk solution. And that's the whole point: a fully-functional IDMS solution in a single, ready to go package.

INCLUDED HARDWARE:

- Touch screen HD TV (for all inputs and responses)
- Fingerprint capture device
- Camera
- ID reader
- Document scanner
- Receipt printer (for scheduling and receipt) and ASOCS ensure contract compliance

PRE-CONFIGURED INTEGRATION OPTIONS:

- Designated Aviation Channelers: Telos ID or AAAE TSC
- Learning Systems: SSi, AAAE IET or Net Dimensions
- Physical Access Controls: AMAG, CCure, Crossmatch/Guardian, HID, Matrix/Frontier or MiFare
- Business Systems: Civix ABRM, PROPworks, SAP
- Federal Agencies: CBP, DOJ, DOT, FBI, TSA and CALDOJImage comparison
- Enhanced badging services (remotely printed: increased security: laminated, holographic overlays, etc.)

KIOSK-BASED: Adopting a kiosk-based, modular approach results in lower costs and risk, opening up the market to small and mid-sized airports.

AFFORDABLE: The Secure Credentials Express pricing model is transaction based (badges, background checks and the like) and annual based (hardware and software). Deployed as a SaaS solution with much of the work taking place remotely and prior to delivery, the labor & services costs are fixed and much lower than traditionally-deployed IDMS solutions.

TURNKEY SOLUTION: With the exception of the badge printer, everything will arrive in a single sit-down kiosk, preconfigured and ready to plug into the wall.
