

SESSION 6 - Registration and Data Entry into ADIP**QUESTIONS:**

NAME	COMPANY	EMAIL	QUESTION	NOTES
Troy Reiser	Illinois Division of Aeronautics	troy.reiser@illinois.gov	1. Where do you confirm if an airfield is to be published (charted) or not published (un-charted) on sectional charts?	This question was sent to Chris Criswell with the FAA, waiting on his response.
Sean Hammer	MDOT, Maryland Aviation Administration	shammer@bwairport.com	1. Does the Wildlife Survey show the previous years answers/data or does it default all questions to "no" each time? 2. Is the Manager's Address (data element #15) the physical address of the airport or where the manager receives mail?	It defaults all questions to no. Manager's mailing address.
Greg Hampshire	Wyoming Dept. of Transportation	greg.hampshire@wyo.gov	1. I was told once that 122.9 was the only true CTAF frequency. In Wyoming we have several airports that have been assigned 122.8. This really is an advisory frequency since no one is monitoring it. I have been entering "activate lighting 122.8" in the comment section. Someone, I assume from the FAA, has been changing those comments to "activate lights CTAF". 2. Do you still need to save changes on every tab or can you do it one time after editing data on all tabs?	This would have to be answered by the ADT specialist for your state. Contact Robert Worthington for the state of Wyoming (robert.ctr.worthington@faa.gov) One time after editing your data, the program will remind you to save your changes before you submit them.
